Senior Software Engineer @ Coinbase

July 2025 - May 2026

- Worked on Base App. A React Native social and financial app built on the Base blockchain, with social feeds, posting, media, wallet, and payments.
- Designed and architected a notification system for external mini apps to notify users in Base App using Kafka and Temporal in Go.
- Prototyped and built Kalshi and Polymarket prediction markets support across the entire stack.
- Built and ran a referral system with weekly revenue share rewards based on trading activity.
- Experimented with and built internal AI tooling and infra, and an app for dev testing across micro-services.
- Built ETL pipelines with Snowflake and Databricks.
- Built various front-end features and infra with Relay/GraphQL.

Senior Software Engineer @ OpenRank / Cura

Jan 2025 - July 2025

- Designed, architected, and built the Cura app, a community-focused decentralized social media app with multiple feeds, leaderboards, rewards, and channel management. Available on iOS using Expo React Native and web using Next.js, with a shared codebase.
- Lead all product and the frontend team.
- Built many mini apps on Farcaster.

Founder @ Butterfly

Nov 2022 - Dec 2024

- Web3 social client built on Ethereum (Farcaster/Lens/Zora/Sound) available on iOS/Android/web using Expo React Native and Next.js.
- Many native features like audio spaces, messaging, token tips and trading, audio player, in-app collecting, mini apps browser, and much more.

Founder @ HyperCharts

Jan 2019 - June 2022

- Financial data platform for public company financials and business metrics targeted for retail investors.
- Started it as a tool for myself to cover Tesla, and grew to cover more than 200 companies with a monthly premium subscription.
- Acquired in 2021 by Public to become Public premium (public.com/premium)

Founder @ Auva Studio

2015 - 2019

- Lead, architected, designed, and developed various mobile and web software projects for clients like Black Rifle Coffee, Bridgestone, 3M, Goodlife Fitness, and local startups.
- Developed and released my own apps:
 - Funds (simple budget calculator)
 - Ajenda (appointment scheduling for small business)
 - Basket (investment portfolio tracker)
 - Pretzel (streaming aggregator for movies and shows)

Lead Software Engineer @ Red Rhino

Dec 2013 - Jan 2015. London, Canada

- Lead, architected, designed, and developed various web (PHP, Angular) and iOS (Objective-C) projects across the entire stack (server, APIs, web front end, etc...) for clients and internally.
- Built various internal operational and reporting tools for staff and management.
- Lead all software and IT projects.

Software Engineer @ Cisco / NDS

Sep 2011 - Nov 2013. London, Canada

- Developed a web-based TV guide and iOS apps with Objective-C.
- Lead and developed an analytics application for settop box usage with PHP and MySQL.

Software Engineer @ BlackBerry / Research In Motion

July 2010 - Sep 2011. Waterloo, Canada

- Developed the user interface for the BlackBerry PlayBook tablet using C++ on a new OS.
- Developed and prototyped UI/UX for a new media streaming device and built the needed architecture, services and interaction layers including a new graphics framework using ActionScript.

Software Engineer @ Comcast Video / TVWorks Canada

May 2006 - June 2010. London, Canada

- Developed embedded software for cable set-top devices and program guides using Java, C, C++.
- Built internal web-based tools using PHP and .NET.

B.Sc. Honors Computer Science @ Western University

2001 - 2005. London, Ontario, Canada
